

# VMS Production Certificates

Given that VMS is reaching a go-live phase next week, we would like to inform you to download and install the following certificates, in order to access production services.

## PKI repository

PKI Certificate Authority (CA) certificates are publicly available on the following links:

1. VMS Production Root CA certificate - <http://pki.vms.fracs.org.fj/pki/VMSRCA.cer>
2. VMS Production Issuing CA certificate - <http://pki.vms.fracs.org.fj/pki/VMSICA1.cer>

**These certificates should be installed on all machines that will have access to VMS Production environment.**

Usage of client certificate from FRCS VMS Production PKI depends on the following requirements:

1. Adding Root CA certificate ("VMSRCA.cer" for Production environment) to Trusted Root Certificate Authority store
2. Adding Issuing CA certificate ("VMSICA1.cer" for Production environment) to Intermediate Root Certificate Authority store
